

Swat Minerals is a well-known mining and trading company for the last 5 years. Our head office is in Tianjin China. As well we have an office in Venice Italy. We are a group of professionals who ardently embrace new challenges in the world of metals and stones

We examine mining areas by taking out samples; make detailed feasibility report which is approved by experts We excavate, crush and sort the ore at the mine which is then transported to our Karachi Stockyard for further cleaning and crushed to the required size of our customers. Then the procedure of packing, preserving and handling is carefully carried out for shipment. The aim always is to develop a long term mutually beneficial business.

Swat Minerals is a well-known mining and trading company for the last 5 years. Our head office is in Tianjin China. As well we have an office in Venice Italy.

## **The Projects:**

Swat Minerals is focused on acquiring mineral projects of merit containing under utilized data sets where additional value can be extracted with modern technology at minimal cost

## **The Management:**

Swat Minerals is managed by a seasoned professional team experienced in mining, business management, engineering and geology devoted to responsible mineral exploration discovery and development.

## **THE INVESTMENT LEVERAGE:**

Exploration is a high-risk activity requiring a continuous feed of capital in order to test geological ideas. Accordingly, the discovery of economic deposits brings high rewards to those investors who share the vision of successful explorationists.

## **THE RESULT:**

Successful mineral exploration and mining creates real wealth by providing the materials necessary to support and advance our technology driven society in a responsible and sustainable manner.

# Silica Quartz

Silicon dioxide, also known as silica, is an oxide of silicon with the chemical formula  $\text{SiO}_2$ , most commonly found in nature as quartz and in various living organisms. In many parts of the world, silica is the major constituent of sand. Silica is one of the most complex and most abundant families of materials, existing as a compound of several minerals and as a synthetic product. Notable examples include fused quartz, fumed silica, silica gel, and aerogels.

# Talc

Talc, or talcum, is a clay mineral, composed of hydrated magnesium silicate with the chemical formula  $\text{Mg}_3\text{Si}_4\text{O}_{10}(\text{OH})_2$ . Talc in powdered form, often combined with corn starch, is used as baby powder.
